Professional Summary

Full Stack Developer with **3 years of experience** in designing, developing, testing, deploying, and maintaining scalable web applications. Strong expertise in the **MERN Stack (MongoDB, Express.js, React.js, Node.js)**, along with hands-on experience in **PostgreSQL, RESTful API Development**, and **AWS**. Skilled in **Docker, CI/CD Pipelines, GitHub Actions, DevOps, Automation Testing**, and **API Testing**. Experienced in delivering secure, reliable, and high-performance applications across the complete **Software Development Life Cycle (SDLC)** in **Agile** environments.

Skills

Programming Languages: JavaScript, TypeScript, Python, Java, SQL
Frontend Development: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Web Design
Backend Development: Node.js, Express.js, NestJS, FastAPI, REST APIs, GraphQL, Microservices
Databases: PostgreSQL, MongoDB, MySQL, Redis
Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CI/CD, Linux
AI & Generative AI: OpenAI API, Google Gemini, Claude, LangChain, LangGraph, RAG, AI Agents, Prompt Engineering, Vector Databases
Version Control & Tools: Git, GitHub, Jira, Swagger, Visual Studio Code
Architecture & Development Practices: System Design, Microservices Architecture, Agile, Scrum, SDLC, Object-Oriented Programming

Professional Experience

03/2022 – 12/2024 **HCL Technologies | Full Stack Developer**
Client: **Kaiser Permanente, USA**
Project: Care Delivery Technology Services (CDTS)
Team: Common Provider Master (CPM)

Project Overview: Common Provider Master is an enterprise healthcare platform that collects, consolidates, and maintains provider information received from **multiple Kaiser Permanente applications**. The platform creates a centralized source of doctor information, including provider profiles, specialties, practice locations, appointment availability, scheduling details, and insurance-related data. This information supports accurate provider searches, appointment booking, and efficient healthcare delivery.

Key Responsibilities:

- Designed, developed, and maintained full-stack web applications using the **MERN Stack — MongoDB, Express.js, React.js, and Node.js**.
- Integrated multiple source applications to retrieve, process, validate, and consolidate doctors' information into the Common Provider Master platform.
- Developed responsive and reusable React components for managing provider profiles, specialties, locations, and appointment availability.
- Built **RESTful APIs** and backend services using Node.js and Express.js to exchange provider data across integrated applications.

- Implemented business logic for provider-data management, appointment scheduling, available time slots, and insurance-related information.
- Worked with **MongoDB and PostgreSQL** to store, retrieve, validate, and maintain accurate provider data.
- Integrated frontend components with backend APIs and databases to deliver complete end-to-end application functionality.
- Performed unit, API, integration, and automation testing to ensure application quality, reliability, and data accuracy.
- Debugged application issues, resolved defects, and supported production and performance improvements.
- Participated in application deployments using **AWS, Docker, Git, and CI/CD pipelines**.
- Collaborated with developers, QA engineers, business analysts, and stakeholders in an Agile/Scrum environment.
- Contributed to improving provider-data consistency and accessibility across healthcare applications.

Projects

Professional Project | HCL Technologies Client: [🔗](#)

Kaiser Permanente, USA **Project:**

Technologies: React.js, Node.js, Express.js, MongoDB, PostgreSQL, REST APIs, AWS, Docker, CI/CD

Developed and supported an enterprise healthcare platform that collects, validates, and consolidates provider information from multiple Kaiser Permanente applications into a centralized system. The platform manages doctors' profiles, specialties, practice locations, contact details, appointment availability, scheduling, available time slots, and insurance-related information.

- Developed responsive and reusable frontend components using **React.js**.
- Built RESTful APIs and backend services using **Node.js and Express.js**.
- Integrated multiple source applications to retrieve, process, and consolidate doctors' information.
- Implemented functionality for provider search, appointment availability, scheduling, and time-slot management.
- Worked with **MongoDB and PostgreSQL** for provider-data storage, retrieval, validation, and maintenance.
- Performed API testing, debugging, defect resolution, and frontend-backend integration.
- Supported application deployments and releases using **AWS, Docker, and CI/CD pipelines**.

Multi-Role Food Ordering Platform | Full Stack [🔗](#)

Developed a full-stack food ordering and restaurant management platform with dedicated dashboards for Users, Admins, and Super Admins. The application supports menu browsing, cart and checkout functionality, order tracking, restaurant management, and secure role-based access.

- Built separate **User, Admin, and Super Admin dashboards** using React.js with protected routes and role-specific functionality.
- Developed RESTful APIs using **Node.js and Express.js** for authentication, users, restaurants, menus, carts, and orders.
- Implemented secure **JWT authentication** and **Role-Based Access Control (RBAC)** across frontend routes and backend APIs.
- Created a complete ordering workflow that allows users to browse menus, add items to the cart, checkout, place orders, and track order status.
- Developed administrative features for managing restaurants, menu items, users, administrators, and incoming orders.
- Designed and managed **MongoDB schemas** for users, restaurants, menus, carts, and orders, including nested order-item data.
- Implemented complete order-lifecycle management, including placed, confirmed, preparing, dispatched, delivered, and cancelled statuses.

Technologies: React.js, Node.js, Express.js, MongoDB, JavaScript, REST APIs, JWT, RBAC, HTML5, CSS3

Payment Ledger & Expense Tracker | Full Stack

Technologies: React.js, Node.js, Express.js, PostgreSQL, REST APIs

Developed a full-stack payment ledger and expense-tracking application for recording income, expenses, and financial transactions. The platform provides categorized reports, running balances, spending summaries, and interactive dashboards while using PostgreSQL to maintain accurate and consistent financial records.

- Built responsive dashboards, transaction forms, charts, and spending summaries using **React.js**.
- Developed **RESTful APIs** with Node.js and Express.js for transaction creation, updates, retrieval, and reporting.
- Designed a relational PostgreSQL database for income, expenses, categories, and transaction records.
- Implemented categorized reporting, balance calculations, and SQL aggregation for accurate financial summaries.
- Added filtering and search functionality based on date, category, transaction type, and amount.
- Created visual breakdowns to help users understand spending patterns and overall financial activity.

Education

01/2025 – 08/2026	Master of Science in Computer Information Systems
Delaware, USA	Wilmington University
